

# RADIATORS

The electric  
heating revolution

CATALOG

## INNOVATION IN CARBON FIBER HEATING

Thermal Technology® radiators are designed to ensure uniform, fast, and controlled heating, thanks to the use of carbon fiber resistors integrated into a compact and lightweight structure.

The absence of hydraulic components allows for simplified and flexible installation, making them ideal for new constructions as well as renovation projects.

Their long lifespan and zero maintenance requirements represent a significant advantage for the end user and an added value during the design phase.

The technological core of these designer radiators of carbon fiber resistors, which deliver superior performance compared to traditional heating elements, offering greater energy efficiency and lower thermal inertia. This results in immediate and consistent heating.

Not subject to thermal deformation, carbon fiber ensures long-term reliability without oxidation, does not generate harmful electromagnetic fields, and helps maintain a healthy and safe indoor environment.

## THERMAL TECHNOLOGY®

Founded in 2001, Thermal Technology® was established with the goal of revolutionizing the heating industry through the use of carbon fiber as a heating element.

The experience gained in high-performance environments such as MotoGP and Formula 1 has enabled the company to transfer advanced know-how into the design of electric heating solutions for residential, commercial, and

industrial environments.

Thermal Technology® designer radiators represent the perfect combination of contemporary design, energy efficiency, and environmental sustainability, meeting the needs of professionals seeking cutting-edge technologies for architectural and system integration.

### ENERGY SAVINGS

Made with carbon fiber, the radiator reduces energy consumption by up to 40% thanks to faster and more uniform heat distribution. It optimizes overall performance, minimizes energy waste, and ensures consistent comfort, even in the most demanding environments.

### NO GAS

The 100% electric operation ensures precise temperature control and a significant reduction in energy consumption. Heat is emitted without combustion or energy loss, resulting in a CO<sub>2</sub>-free system that is fully ecological and free from harmful substances.

### COMPACT STRUCTURE

The compact structure and minimal design allow for quick and easy installation, even in limited spaces and without hydraulic connections. The lightweight construction simplifies handling, offering an elegant, practical, and functional solution for any environment.

### CARBON FIBER

Thanks to its high electrical resistivity, carbon fiber provides significant energy savings while maintaining the same heating power, ensuring efficiency and long-lasting comfort. In addition, it does not generate harmful electromagnetic fields, helping to create a healthier indoor environment.

### WIRELESS READY

The radiators are equipped for wireless connection via Zigbee technology, ensuring stable and secure communication thanks to the integrated modem. The system allows for remote management through an app or home automation, enabling a modern and intuitive user experience.

## THE RADIATOR BECOMES SMART TODAY

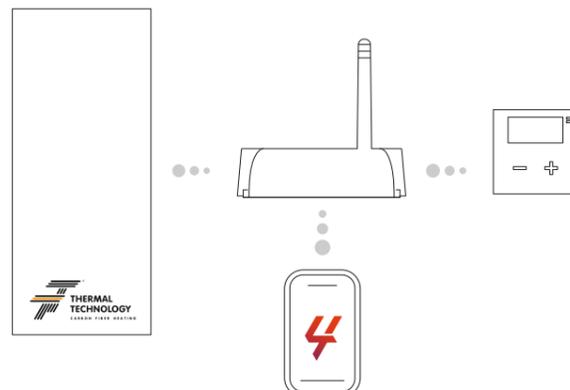

THE EVOLUTION OF THE DESIGN RADIATOR: IDEAL COMFORT, MAXIMUM EFFICIENCY, AND REMOTE CONTROL

### CONNECTED HEAT

The Thermal Technology and 4-Noks ecosystem is designed to transform heating into an intelligent, efficient experience, perfectly integrated into your spaces. Integration with Thermal Technology radiators goes beyond the traditional concept of a radiator, turning it into a truly smart designer radiator.

Thanks to integration with the WhiteBox and the Rialto line thermostat, the radiator communicates with the 4-Noks home ecosystem and becomes fully remotely controllable. Temperature can be adjusted and scheduled directly from a smartphone or via voice command, providing immediate comfort and optimized energy consumption throughout the home.

### ENERGY EFFICIENCY THAT MAKES A DIFFERENCE

The true strength of the integration between Thermal Technology and 4-Noks lies in its ability to significantly optimize energy consumption. The system constantly monitors and adjusts heat output, preventing unnecessary losses and adapting in real time to the actual needs of each space.

This approach allows:

- a significant reduction in energy consumption
- lower environmental impact
- tangible savings on operating costs
- optimal Hospitality management
- reduced installation costs

### A SYSTEM THAT GROWS OVER TIME

The integration of Thermal Technology radiators represents the first step toward a fully smart home, office, or hospitality facility. Once the radiator with 4-Noks technology is installed, the entire 4-Noks home automation system can be progressively extended to all spaces.

Shutters, lights, blinds, outlets, and any electrical devices can be integrated into a single connected ecosystem, managed in a centralized and intuitive way.

Each function communicates with the others, creating automated scenarios that enhance comfort, efficiency, and space control.

The 4-Noks ecosystem is also designed to operate in self-consumption mode, integrating with photovoltaic systems. The energy produced is used intelligently to power devices, optimize loads, and further reduce energy costs.

## GUIDE TO CHOOSING THE PERFECT RADIATOR

Thermal Technology radiators and towel warmers provide uniform and efficient heating, reducing energy consumption by up to 40% compared to traditional systems. The ultra-slim design ensures discreet installation, while Thermal Technology technology distributes heat through radiant heating, delivering natural and comfortable warmth.

These devices are eco-friendly, with zero CO<sub>2</sub> emissions and no maintenance required.

Recommended sizing, based on the climate zone:

Warm zones : 250 W for rooms up to 12 m<sup>2</sup>.

Temperate zones : 500 W for surfaces up to 19 m<sup>2</sup>.

Cold zones : 1000 W for spaces up to 40 m<sup>2</sup>.

Very cold zones : 1200 W for rooms up to 45 m<sup>2</sup>.

Modell	Power (W)	Zone B – Warm (mc)	Zone C – Mild (mc)	Zone D – Temperate (mc)	Zone E – Cold (mc)	Zone F – Very Cold (mc)
