

MATIRIA
The art of heat

A UNIQUE EXPERIENCE OF LIVING COMFORT

BENEFITS FROM THE UNION BETWEEN TERRACOTTA AND CARBON

The project is based on electric heating using carbon fiber, an innovative process permitting substantial energy savings, with no harmful electromagnetic emissions.

The terracotta has a very high capacity of heat accumulation and it is released gradually in ambience. Matiria heating products have a design of great value. Artisanal manufacture of each work permits us a maximal customization of the product. The heaters, designed and projected in Italy using high quality raw materials, are characterized of high degree of originality and a distinctive style.
